

MUHAMMET MERT GÖRGÜLÜ

Mechatronics Engineering Student — Robotics, Automation & Control Systems

Manisa, Türkiye · +90 531 897 29 40 · mmertgorgulu@gmail.com · mertgorgulu.com

ABOUT ME

Mechatronics engineering student with hands-on project and field experience across autonomous vehicles, robotics, and industrial automation. Comfortable working across the software, simulation, and control layers of technical systems using ROS2, Python, PLC platforms, and web technologies. Focused on turning technical requirements into clear, feasible solutions and taking an active role in cross-functional, team-based environments.

EXPERIENCE

Electrical-Mechanical Maintenance Intern | Agrobest Grup

06/2026 – 08/2026 — Türkiye

- Gained hands-on field experience in electrical-mechanical maintenance, observing and supporting industrial systems in a live production environment.
- Worked closely with maintenance teams on fault diagnosis, preventive maintenance, and process-improvement tasks.
- Contributed to single- and multi-axis PLC control systems as part of automation projects.
- Built practical experience in PLC programming and HMI design using TIA Portal, DOPSoft, and DIAdesigner.

Search Engine Quality Evaluator | Gini Talent (Yandex)

06/2024 – 03/2025 — Remote

- Performed evaluation and quality-focused tasks for the Yandex search engine quality improvement program.

English Call Center Representative | WebHelp

07/2022 – 10/2022 — Türkiye

- Managed customer communication in English, informing customers and resolving issues — building strong verbal communication skills.

PROJECTS

- Poyraz Robotaksi — Autonomous Vehicle Project** (2022–2023): Team became finalist in the Robotaxi-Passenger Autonomous Vehicle Competition with vehicle "Karaçor"; personally contributed to robotic software and system-integration work.
- UARTEK Rover — Rover & Robotic Arm Systems (University Project)** (2023–2025): Developed robotic arm software and virtual-environment simulations during rover development; contributed to the rover's communication system.
- UARTEK Galvanometer-Based Air Defense System** (2024–2025): Built the autonomous/manual-mode user interface and a Python-based control application as part of the Teknofest application process.

FOCUS AREAS

Industrial Automation & PLC Control · Autonomous Systems · ROS2 Simulation · Robotic Arm Control · Python-Based Interfaces · Web Interfaces

TECHNICAL SKILLS

Automation & Control: PLC (Single & Multi-Axis Control), TIA Portal, DOPSoft, DIAdesigner, ROS2

Programming & Web: Python, PyTorch, JavaScript, Node.js, SvelteKit, HTML & CSS

Other Tools: SolidWorks, MS Office

EDUCATION

Mechatronics Engineering — Manisa Celal Bayar University · 2022 – 2027

LANGUAGES

Turkish — Native (C2) · English — Advanced (C1)
